## ABOUT WINGATE

We are a leading company in the UK providing **Electrical and Plumbing** facilities to enable project construction.

We have a comprehensive skill base, a network of offices throughout the UK and a fleet of Plant & Equipment to support all reasonable day-to-day requests and most unreasonable ones too.

Each office operates within a geographical area with the necessary workforce to meet the commitment we offer our clients. This includes contract management, commercial, technical and estimating personnel as well the operatives on site.

The service we provide includes:

### DESIGN

When you are submitting your own tender and where you have time we will assist you with a scheme and associated costs. To help determine meaningful costs we can work with minimal information by visiting your offices to discuss your potential requirements and provide our experience of similar projects we have completed. Where you have secured the project and determined your scope of works we can provide designs and costs in the form of a competitive tender.

### SUPPLY

We will provide all necessary Plant, Equipment and Materials to complete our installation. Where refurbished equipment is used we have our own fully operational workshops to maintain our asset to the manufacturer's original operating standards.

### INSTALLATION

Our installations conform to current standards, regulations and are carried out by qualified installation operatives who are CSCS registered.

### MAINTENANCE/ATTENDANCE

Within a scope we can provide planned maintenance or visiting attendance to suit your project requirements. We also operate a call-out facility that includes out of normal working hours for any emergency.

### TESTING

All testing is carried out by our own test engineers. They are not involved with installation activities and report directly to Contract Managers.

## PROJECT SOLUTIONS

We begin by **Listening**, we assist through **Experience** and we resolve with **Expertise**.

We understand the need to work **Safely**, control costs and comply with programme constraints in a demanding environment.

## PROJECT EXPERIENCE AND EXPERTISE

We operate with a determination to **deliver** our service **on time** and with **minimum disruption** – but we need the help of your project team.

Early notice of changes to programmed works or known future works can not only save on cost but also on frustration to all parties.

Completing any package or the complete project successfully is about people and their relationships.

Our team consists of skilled individuals who are long serving in the construction industry. Their experience within the often difficult operational constraints is invaluable.

They are fully qualified to current industry standards and are fully conversant with the latest Health & Safety regulations.

Our expertise covers all Private and Public sector projects and includes those that require personnel 'security' checking. A large percentage of our people are security cleared in areas such as Airport Terminals (Airside), Rail and MOD establishments.

## COMMERCIAL APPROACH

We have experienced commercial personnel who understand many different Forms of Contract.

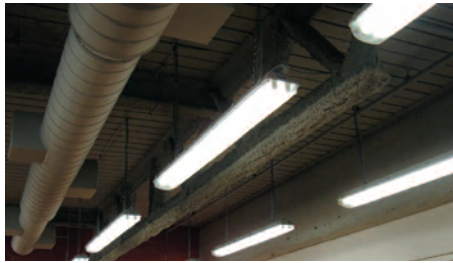

We can, if requested, provide full **Cost Transparency** and regularly monitor prices to ensure competitiveness and value for money. This approach facilitates our willingness to agree project values promptly after completion.

## PROJECT SAFETY

There is **No Compromise** on safety.

**Health & Safety** is an active Main Board objective and all employees are thoroughly briefed prior to each new work activity. In consultation with our operatives we **actively review** our Safe Systems of Work, Method Statements and Risk Assessments.

These can be modified to suit an individual requirement.
